

Soorya Narayanan V

Los Angeles, CA | +1 (213) 843-8543 | soorya220104@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Data Engineer and ML practitioner at USC working with Google + Verizon funded projects, building production ETL pipelines, ML-ready data systems, and scalable cloud-native infrastructure on GCP/AWS with experience in deploying models to live users.

EDUCATION

University Of Southern California

August 2025 – May 2027

Masters in Applied Data Science. (GPA: 3.85/4.0)

Los Angeles, CA

- **Coursework:** Data Mining (PhD), Machine Learning for Data Science, Applied Natural Language Processing.
- **Grader** for USC's Data Visualization Course (DSCI 554) – React | Vue.js | D3.js | Data Viz for live data.

Anna University

September 2020 – May 2024

Bachelors in Artificial Intelligence and Data Science. (GPA: 3.7/4.0)

Chennai, India

- **Coursework:** Data Structures & Algorithms, Machine Learning, Natural Language Processing, Data Science.
- **Minors:** Business Data Analytics

Awards & Certifications: <https://inkedsin.wordpress.com/soorya-narayanan-v>

SKILLS

Languages & Fundamentals: Python, Typescript, SQL, C++, Git, Linux Bash, Scala

ML Frameworks: PyTorch, TensorFlow, Keras, OpenCV, Scikit-Learn, JAX, NumPy, Huggingface, CUDA, RAG, MCP, DDS

MLOps: Flask, Docker, Kubernetes, Spark, Airflow, GitHub Actions, CI/CD Testing, Automated Retraining, RabbitMQ, Kafka

Machine Learning: LMM, VLM, LLM, Train, Post-Training, Inference, SVD, XGBoost, NLP, CV, SFT, LoRA, Distillation

WORK EXPERIENCE

Directed ML Researcher – WiDES Lab (Verizon)

February 2026 – Current

University of Southern California

- Trained PMNet Neural Network on 5 urban scenes across 19,000+ geospatial samples, achieving 97% signal propagation accuracy on HPCs with cross-scene generalization to unseen environments.
- Engineered an end-to-end ETL pipeline ingesting 3D geospatial urban simulation data (Wireless InSite + NVIDIA Sionna) into ML-ready training datasets, achieving 57% 5G signal accuracy and delivering transmitter placement recommendations to Verizon.

Graduate Research Assistant – CeNEC Lab (Google)

September 2025 – April 2026

University of Southern California

- Built a systematic evaluation framework and best-practice benchmarking pipeline across 10 frontier LLMs, producing structured analysis reports and technical findings that informed model selection decisions, identifying where models were confidently wrong against human cognitive baselines.

ML Engineer (Model Evaluation & Computer Vision)

July 2024 – August 2025

Mirador Technologies

- Rebuilt Wild Face Recognition system on real-time live footage using RabbitMQ, FAISS-backed vector embeddings, and re-architected data pipeline on preprocessing and training, boosting accuracy from 42% to 93%, led customer-facing technical demos and solution walkthroughs advising on deployment architecture that converted 2 enterprise prospects into paying clients.
- Built and evaluated every major open-source Face Recognition and detection model (as available till May 2025), fine-tuned to client requirements, and maintained comprehensive technical documentation for AI/ML model inventory.

Data Science Intern

May 2023 – August 2023

Vizza Insurance Broking Services Pvt Ltd

- Built SQL + Python ETL pipelines surfacing 7 KPIs into a LightGBM lead-scoring model, reducing lead-to-conversion from ~3 days to ~7 hours (71% reduction) and improving sales conversion by 65%, with automated retraining triggered on incoming data shifts, delivering actionable KPI dashboards that directly informed sales operations strategy.

PROJECTS

Intelligent Bistro

May 2025 – Current

Built AI-powered food ordering app (Expo React Native + Node.js) with 9 custom tool-calling functions, Zod validation, MCP server for production analysis, CI/CD Testing 236 tests – 94% coverage, voice TTS/STT, 4-signal recommendation engine (popularity, session, pairings, compatibility), SQLite backed order management with automated data validation. ([Demo Link](#))

Immunity

January 2026 – Current

Built Clinical AI allergy tracker with LLM routing layer delegating between AWS Nova Micro and MedGemma 4B, 4-bit quantization, storing conversation in DynamoDB with schema-defined data models for active users in production.

Reinforcement Learning Autonomous Driving

December 2025

Trained a PPO-based RL agent on a custom ray-casting car simulation, optimizing reward shaping to achieve stable trajectory control, reducing collision rate by 40% over baseline random policy. ([Link](#))

Sentiment-Driven Portfolio Optimizer

March 2025 – July 2025

- Combined Black-Litterman optimization with FinBERT derived sentiment signals from financial news, achieved a Sharpe Ratio of 1.43, portfolio alpha of 6.2%, and VaR (95%) of 3.1%, outperforming passive S&P 500 allocation, producing investment report.
